RE: Licensing Review Memo + WMS Report

Time Line:

Application for Permit Received: 5/20/2003

Permit Approved: 8/22/2003

Proof of Beneficial Use Received: 7/30/2004

Field Exam Conducted: 7/29/2004

POU Overlap Analysis: There are no other water rights that serve the hog facility.

PD Summary: The PD as recommended by the field examiner is located near the waste pond to the NE of the facility. He measured the system at 0.11 cfs. Apparently the well has changed location at some point because I confirmed with Reed Gibby that the well used for the hog facility is now located to the West and is right next to the well that is used for irrigation purposes. Since the PD is in the same QQ I will identify this well as the PD for this right. Because the field examiner measured the system at 0.11 cfs at the time development occurred, this right will be limited to 0.11 cfs.

Volume and Diversion Rate: The diversion rate will be limited to 0.11 cfs based on system capacity and the volume is based on the permitted volume of 64.2 afa. There is enough proof in the field exam that substantiates this volume.

Conditions: This right was permitted with a condition that required the right holder to measure and annually report information to the department. This right is now within water district 140 that issued an order in 2009 that required the installation of a measuring device. Because the permit condition did not require a measuring device, the department will license this right without any sort of more restrictive condition and will leave it up to the water district to pursue any measuring.

Amendment Needed?: NO. The field examiner recommended an amendment to update the legal description for the PD. However, the legal description for the PD does not need to be refined to the QQQ. In addition, since the well location is different from what the field examiner recommended, the legal description as permitted is correct.
