RE: Licensing Review Memo

Time Line:

Application for Permit Received: August 5, 1980 (extension late, priority advanced to September 3, 1980)

Permit Approved: December 15, 1980

Proof of Beneficial Use Received: November 30, 1990

Field Exam Conducted: May 19, 2009

Conditioning: A combined use limit will be added with 47-7731.

Comment	Water Permit Condition Report
Carry to license	The issuance of this permit in no way grants any right-of-way or easement across the land of another.
Don't carry to license	The permit shall not be assigned or sold without first securing written approval of the Department of Water Resources.
Don't carry to license	09B Return water shall be treated to insure that the effluent meets Idaho Water Quality Standards.
At this time the PD is not regulated by WD 47-O. Order issued to defer the requirement.	Measuring device of a type approved by the Department shall be permanently installed and maintained at the point of diversion and the point of effluent discharge.

POU Overlap Analysis: Right 47-7731 overlaps the POU of this right. Both the Seepage Tunnel water and Slaughterhouse Gulch water comingles on the east side of the property and provides water for the hatchery.

PD Summary: There are no other rights using this PD. No measuring devices have been installed. Since this is not actively regulated by the water district and since the measuring devices are not imperative for the appropriation of this right, an order was issued that modified the condition to defer the requirement.

Volume and Diversion Rate: Please see Mat Weaver's technical review.

Amendment Needed?: The PD will need to be amended since it is within the SWNW QQ rather than the SENW.
