RE: Processing of Transfer Applications

Dear Mr. Manning:

The Department of Water Resources has contacted you several times regarding your pending Applications for Transfer #76657 for water right 45-4138 and Transfer #74087 regarding issues that need resolution before the applications can be processed.

In regards to Transfer #76657, you indicated that one of the troughs is located in the SWNE (Lot 2) of Section 19, T14S, R23E. This is BLM ground and none of the warranty deeds submitted by Larry Roberts cover that ground. I have attached a map indicating the location of the trough in question, and a form for you to fill in the appropriate location with a signature acknowledging the change. I will then be able to amend the application and proceed with the application, provided the new location is covered by one of the deeds previously submitted to our office. If the trough is to remain where indicated, proof of ownership and/or proof of permission from the BLM to locate the trough in said location is required to proceed with this application.

Transfer #74087 will require a copy of the deed for the Marchant 40 acres and a signature on page 2 of the application, which I have attached to this letter, is required to proceed with this application.

Your assistance in these matters is greatly appreciated and will help to speed the processing of both applications.

Sincerely,

William Mills
Water Resource Agent,
Southern Regional Office
