Hello Vicky,

Attached is a corrected map detailing the locations of the new POD sites. We used the mapping tool off of the IDWR web site to create the map. Unfortunately, there is no capability to enter exact GPS locations so the positioning of the PODs is an approximation but we documented the locations using satellite imagery from google maps and they now correlate with the township grids specified on the application. Please let me know if this new map meets your needs.

We really appreciate your help getting this application through.

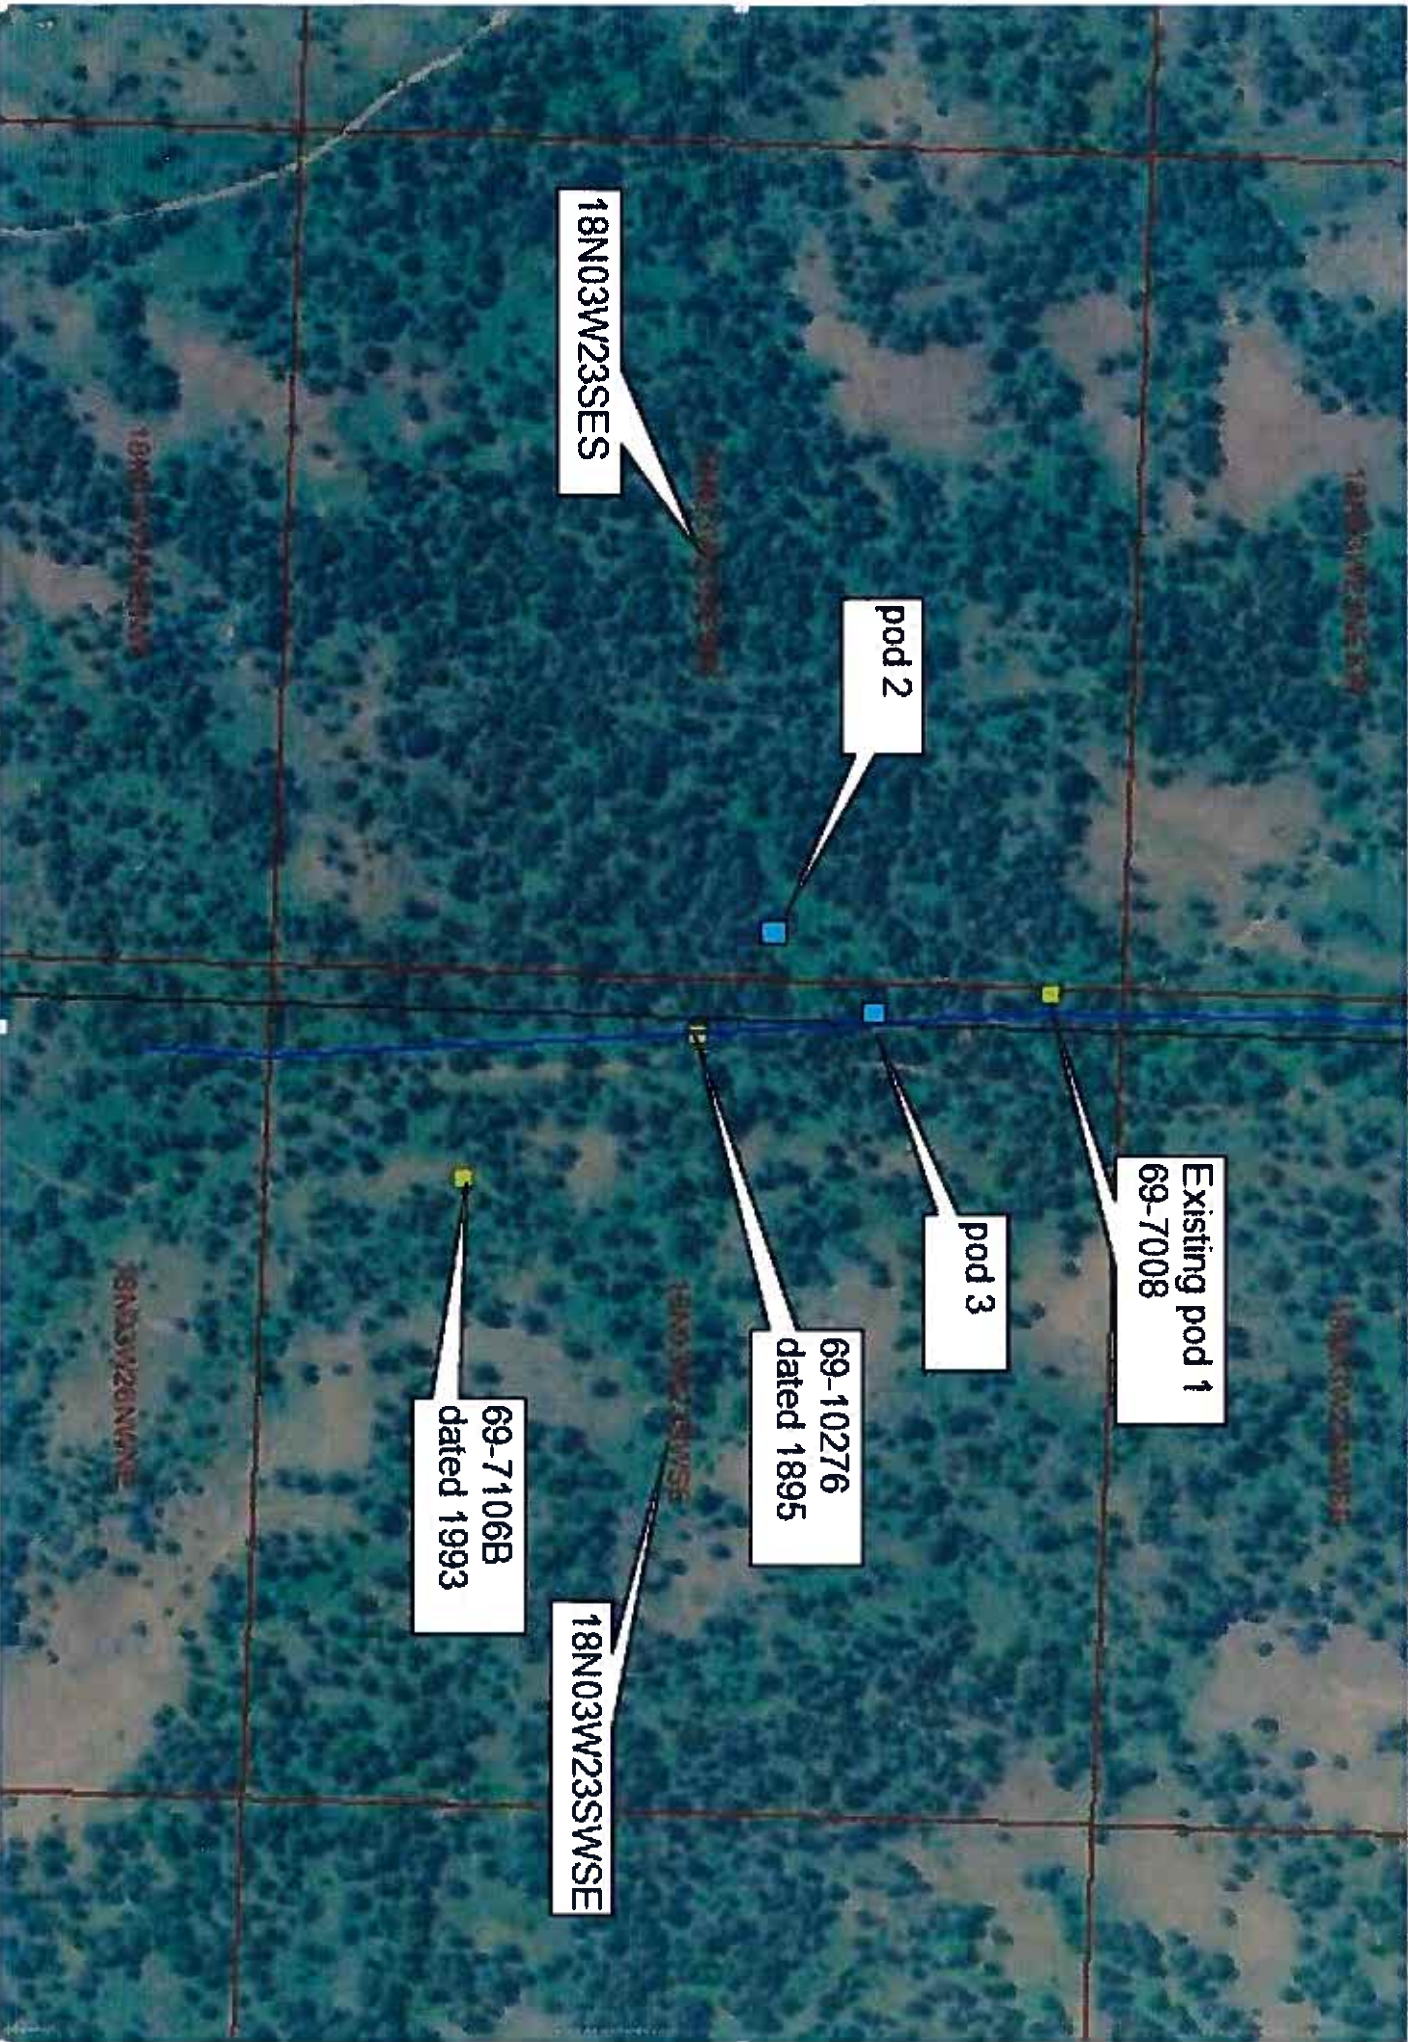

Thank you,
Brad

Brad –

Thank you for your response to my request for additional information. The application will go to advertising in the next few weeks, however, there is an inconsistency that must be clarified before it is finalized. If you compare the maps you emailed to Steve Lester and the map you sent to me, you will see that the POD locations are different. The maps locate one of the “new “ PODs [“New POD 2” in the application] on both sides of the creek. Additionally, in the map you recently sent to me, you have located both new PODs in the NESESW. Will you please provide a “blowup” of the 3 PODs which shows their locations? This is especially important because the PODs are close to the QQ line and the maps must correspond to the application. This information is due January 14, 2011 or the applicant will be voided. Thank you for your timely response.
