The upper pond is lined. The lower pond is unlined and functions as a stormwater pond. The water level in the lower pond fluctuates seasonally with the water table. Settlers has been adamant that any water that is delivered to the lower pond (which receives stormwater) cannot be pumped back to the upper pond (which spills back to Settlers) because Settlers doesn't allow stormwater into their system.

No Nick,

Terry confirmed that the lower pond is unlined.

Lori,

I believe you and answered this question when we last spoke, but the lower pond did indeed get line when constructed?

Hi Lori,

We are we on getting the revamped application submitted? – Nick

Subject: FW: Transfer 66703

Lori,

Attached is page 3 of the application with the changes below made. I think the only thing I need back is that page and a signature page – the rest of the draft you already sent I can just use. A fee of \$200 is needed to cover additional fees. \$150 is needed for the transfer application because the 22.7 af amount brings the transferred amounts to the \$250 tier. I would have used the fee paid with the permit that's being withdrawn to help, however it did get advertised. The remaining \$50 is for the need of re-advertisement.

Have a great weekend. – Nick

Lori,

I got a chance to review the revised application and have a couple initial thoughts/questions – mostly minor stuff that shouldn't really hold up processing.

- To quickly reiterate the overall scheme here, going off Part 1.B.5.a, sounds like all of the Settler's water delivered to the Blue Cross site is put into the ponds, including the irrigation water. Transfer intends to ensure ponds are full from the some of the acres retired, and the irrigation portion remaining will simply run thru the ponds. Given that, I believe Part 1.B.1 (description of rights after requested changes) of the application would more properly describe 63-230L as:

0.06 cfs Diversion to Storage

0.06 cfs Aesthetic (for the small amenity stream, rate inclusive to the diversion to storage cfs, not additive)

22.7 af aesthetic storage (annual fill of 18 plus 4.7 evaporation)

97.31 Irrigation

Totals transferred would be 0.06 and 22.7 af

- The initial proposal stated the lower pond would receive water from either Settler's or groundwater inflow, depending on the time of year. It's been a few months since I spoke with Terry about how the ponds were actually developed and can't quite remember all the details, but if indeed there is no inflow of groundwater (I'm assuming since the groundwater permit is intended to be dropped), is there seepage losses that need to be accounted for? Is only the upper pond lined, or did both end up getting lined?

Feel free to give me a call if you would like to discuss. – Nick

Nick,

Attached is a draft amended transfer application for Settlers Irrigation District regarding water use at the Blue Cross corporate site. Please review the application and let me know if it is acceptable for Department processing. Please feel free to call me if you have any questions or wish to discuss. Thanks Nick.
