

Meeting Notes

Date of Meeting: 10/8/2010

Location: State Office of the IDWR

Attendees: Dr. Carol Lynn MacGregor, permit holder; Cherie Padilla, Sr. Water Resource Agent; Mat Weaver, PE Staff Engineer

The meeting was prompted in response to a letter authored by Mat Weaver dated 9/29/10 regarding permit 65-13912 and 65-13913. During our meeting, many of the issues under 65-13912 raised in the letter referenced above were resolved.

Those items include the following:

- Condition #5, that states that you may be required to obtain additional permits through the Department of Environmental Quality, is no longer a concern so long that a commercial use does not be developed under this permit.
- Condition #7, that states that you shall install and maintain a measuring device and lockable controlling works, has been met. IDWR staff learned at the meeting that the spring diversion has a flowmeter on it with a totalizer and the pump can be locked out. The measuring device is rated for hot water.
- Condition #9 states in part that you "must provide for direct water delivery to water rights no. 65-12891 and no. 65-13332, at no cost to the holder of those rights". IDWR staff learned that this condition has yet to be met at this time and received a request to waive this condition from you. The condition was added to this permit by final order in an attempt to avoid injury to the senior water users that also use the spring. At the meeting, we incorrectly informed you that this condition may be removed from the permit since the development under the permit does not require near the amount of water as initially thought.
- Condition #10, states that detailed designs must be submitted to IDWR regarding quantity of water for heating purposes. This condition has been complied with so long that no additional beneficial use is developed under this permit.

At the meeting, an amendment of permit was submitted along with the required \$50 filing fee. The amendment requested that IDWR change the nature of use from commercial and heating to domestic and heating at the recommendation by IDWR staff. However, upon further contemplation, heating use appears to be the only beneficial use taking place and domestic use may not be applicable. Dr. MacGregor also requested that Conditions #5 and #9 be waived.
