

## Memorandum

Date: November 19, 2010

To: File 34-7562

From: Craig L. Saxton *CLS*

Re: Diversion Rate Recommendation for 34-7562

.....

Despite that an actual measurement was not taken during the 2001 field exam, I think the proposed license diversion rate of 0.10 cfs, which was calculated using the field examiners handbook, is reasonable and appropriate. The time and expense to conduct another field exam just to measure a diversion rate would not be the best use of IDWR resources and therefore not in the best public interest.
