Ann,

I left the source as **Antelope Creek in the application** but changed it to the **unnamed stream with the added condition in the permit** so you probably don't need to change your records. Also, if you want a refund on any extra fees please submit a request in writing.

Thanks, Jeanie

Thanks Jeanie...

if you think of it, will you let us know what the decision is and I'll change some things here to comply.

Antelope Spring seems to be wrong
Antelope Creek is correct

but if not on your maps and unnamed creek works best w/ the notation in the conditions of approval section that it is Antelope Creek, that's fine too.

Appreciate your help,

Ann

Ann,

I'm afraid another question has come up on this one!

Decreed right **45-690** has the point of diversion from Antelope Creek listed as an **unnamed stream**.

Recommended right **45-14182** has the same point listed as **Antelope Spring**.

Application **45-14107** has the same point listed as **Antelope Creek**.

Antelope Creek is not a named stream nor is Antelope spring a named spring on the USGS quad maps. We try to use those as our guidance for naming creeks and springs on rights. Otherwise we put **unnamed creek or unnamed spring** as the source with a remark or condition that says **locally known as...** for clarification.

Can you find out what the real source is at this point of diversion? A spring or is it piped to a stream or just what? We would like to be consistent!

Thanks,

Jeanie

Ann,

We are not planning to change the other rights. As you know, 45-690 already calls it **unnamed stream** and 45-14182 calls it **Antelope Spring**, so by putting that condition in the new permit, it should clear up any confusion and make it clear that they are the **same source**.

Thanks Jeanie...

Will you make this same change on 45-690 too? I haven't checked for any other water rights in this location and can if it will help clear them 'all' up as to the name of the source .

Ann,

What I did was to change the source of Antelope Creek to unnamed stream and then we are putting in the following condition: **The point of diversion for the unnamed stream located within the SWSENW of Section 7, T12S, R24E is locally known as Antelope Creek or Antelope Spring.**
