Uh oh...this map does not match the place of use box. I think the problem is between Sections 1 and 12. Your shape includes some QQs in Section 1 but the box shows no pous in Section 1 but some in Section 12 that are not in your shape?

Here is the new map... we have some updating issues with ArcView and cannot get the legend to stick, so noted the yellow PPU w/ a caption box... hope this will work ok for you.... let me know if it doesn't print ok and I'll drop a copy by.

Thanks Jeanie,

Ann

One more thing...I think this application is supposed to pretty much match right 45-14182, the one they recently filed on and was recommended in the SRBA. This one is for outside the standard irrigation season is all. The place of use and stock water use match and so do the points of diversion except that this one also lists another point of diversion in the NWNWNW of Section 5. It's not on your map as a point of diversion but seems to indicate the collection pond. The application doesn't list the source for this one. Maybe this one shouldn't actually be on there? It is not on 45-14182??

Ann,

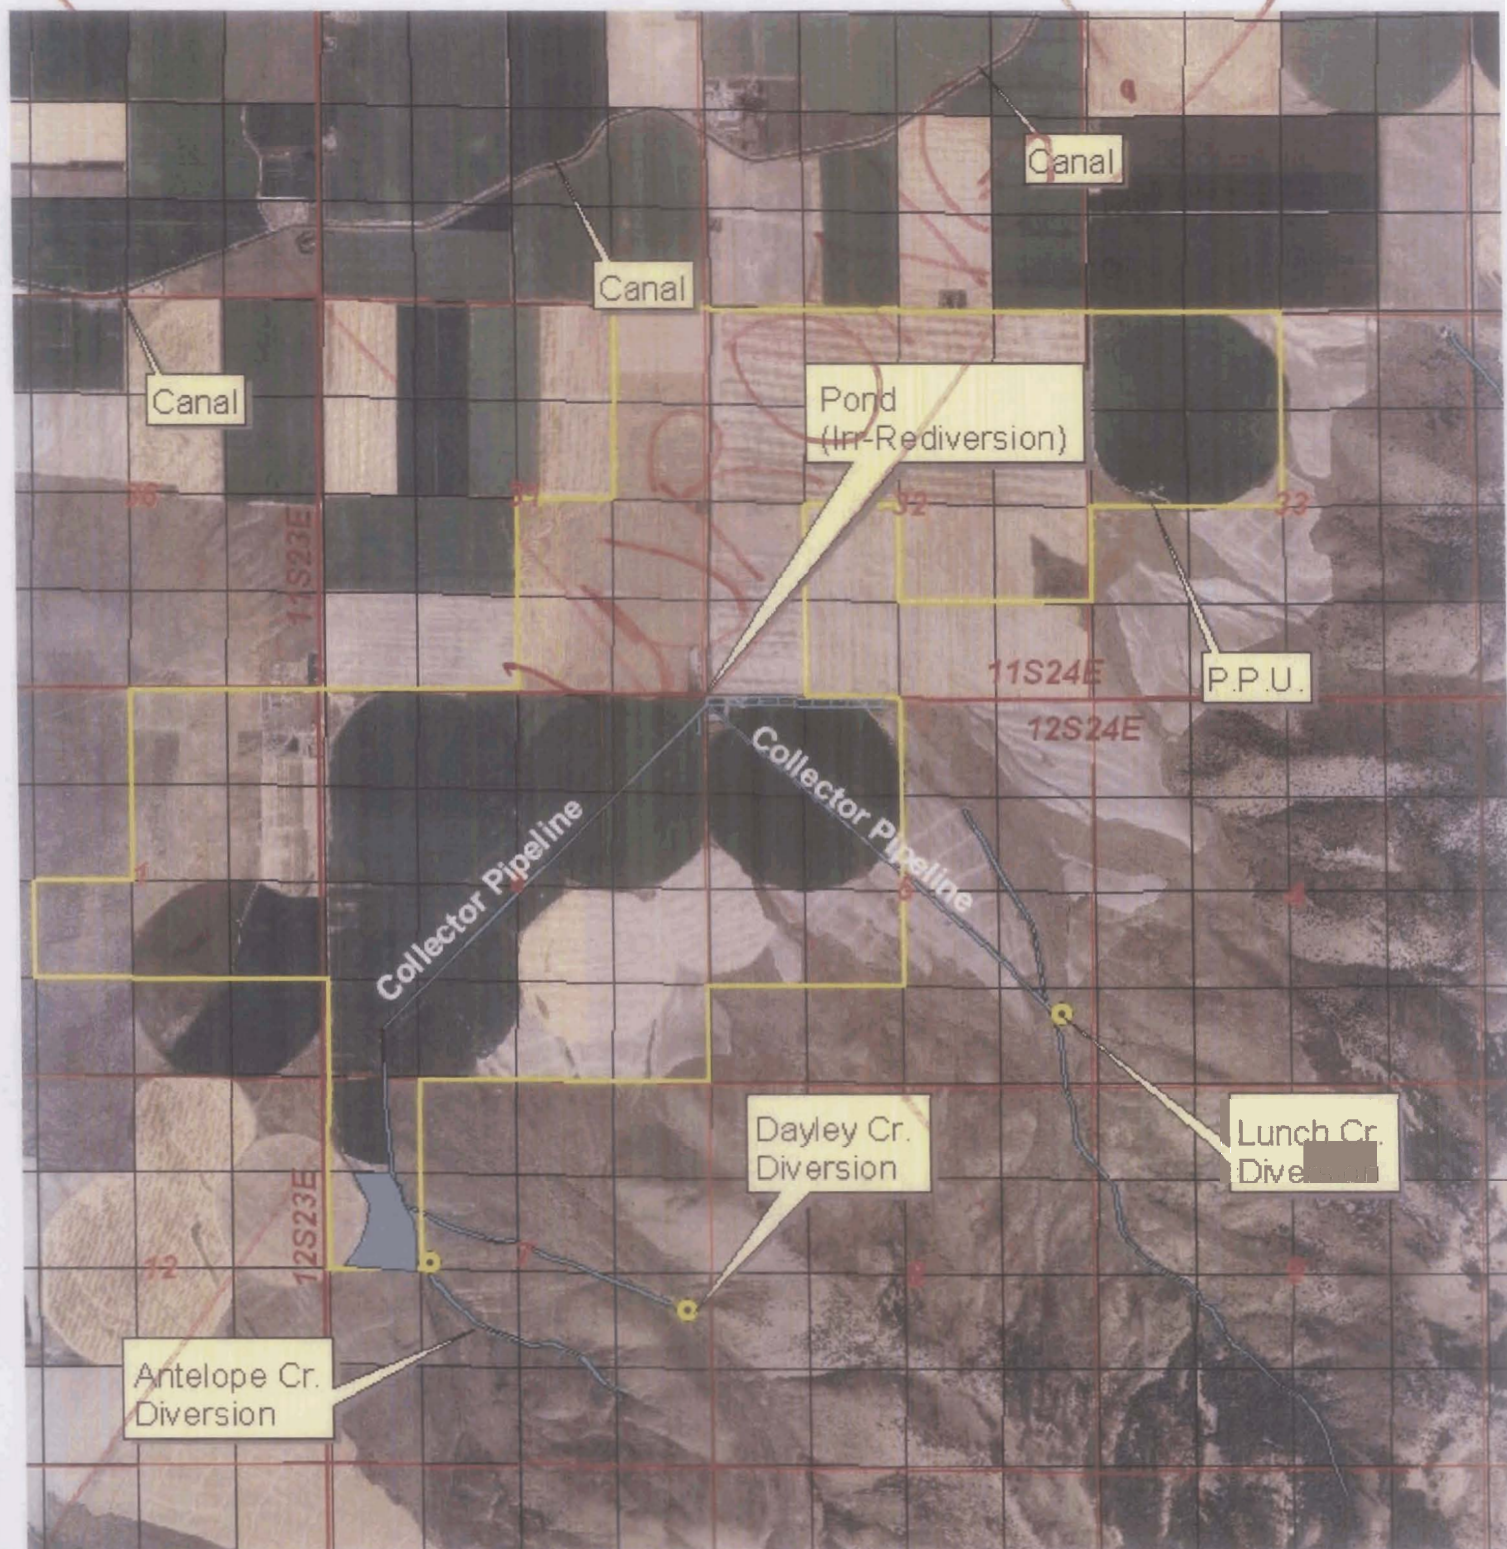

Was off last week and am now starting back with this amended application. I think I need a new map which shows the place of use of all the stock water. As far as I can tell, the map you submitted shows the diversions but doesn't really outline the place of use. I think it will help us know that we got it right if the visual picture is the same as the place of use box so we get everything included that they want. Give me a call if you have any questions or comments. Thanks, Jeanie
