

MEMORANDUM

Date: November 5, 2010
To: File
From: Nick Van Dyke
Re: Analysis of Transfer 76375, City of Rexburg

Narrative: Transfer 76375 seeks to allow for the drilling of 3 new wells for the City of Rexburg and also combine 6 existing wells under city rights 22-7074, 22-7175, 22-7176, 22-7617, and 22-7754. Post-transfer 76375 all 5 rights will list all 9 wells as authorized points of diversion. No other changes requested. 5 years requested to complete transfer (see 8/10/2010 correspondence).

Authority to File: John Millar, the City's Public Works Director, signed the application. Rocky Mountain Environmental Associates Inc. (Rocky Mtn) is the applicant's representative.

Water Right Validity: 22-7074, 22-7175, 22-7176, and 22-7617 have all been partially decreed in the SRBA with partial decree dates ranging from 1/5/2007 to 5/13/2009. 22-7754 with a priority of 12/17/1992 is an active water right license. Forfeiture is not an issue.

Injury to Other Water Rights: A non-standard ESPA modeling analysis method had to be used for this transfer because the model was not designed for how a municipal system operates. A centroid approach was suggested and given the green light by the Department's Hydrology Section. The centroids were weighted on diversion amounts from the existing and proposed wells. Using this technique, the centroids ended up in adjacent cells – rendering the need for modeling null. However a model run was done by Rocky Mtn and results showed the triggers for mitigation were not met. Two limiting conditions were developed to limit the "northern wells" (existing wells under 22-7754 and 22-7074 and proposed well 1) to 4.34 cfs and the "southern wells" (existing wells under 22-7617, 22-7175, 22-7176, and proposed wells 2 and 3) to 12.49 cfs (existing diversion rates). This was done to keep diversions within adjacent cells post-transfer. See attached diagram for illustration.

A third scenario needed to be addressed where water could be moved across non-adjacent cells given certain circumstances: If proposed well 3 does not produce very well, proposed well 2 does, and a certain amount of water pumped from existing wells under rights 22-7175 and 22-7176, or what was anticipated to come out of proposed well 3 is then shifted over to proposed well 2 – the move would be across non-adjacent cells. In response Rocky Mtn modeled a worst-case scenario where the full design pumping capability of proposed well 2 would be moved across non-adjacent cells. The result showed a maximum change ratio of 9% in the Ashton to Rexburg reach. All other reaches were well below 10%. No mitigation required. The model run is attached.

However there was concern proposed well 2 could end up producing more than 6.68 cfs (1612 af per trimester) if design capacity changed. I asked Rocky Mtn to model what would be the highest amount of diversion proposed well 2 could divert before triggering mitigation. In response the designed capacity of 6.68 cfs/1612 af per trimester was submitted. Though not the ceiling amount for what could be shifted over to proposed well 2, a condition limiting proposed well 2 to 6.68 cfs will be on the transfer.

Watermaster comment received – no opposition/comments.

Review Memo – Application for Transfer 76375
Page 2

Enlargement of Use: No enlargement concerns.

Local Public Interest: No issues identified. Application advertised statewide, no protests were received.

Beneficial Use/Conservation of Water Resources: No issues identified. Review of the application finds there is not clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

ESPA Model Grid - Existing Wells Centroid & Proposed Wells Centroid

Map showing existing and proposed wells for the City of Rexburg in relation to the ESPA Model Grid cells.

Entering 'FROM' Well Without Transfer Use

The 'Without Transfer' Use for the 'FROM' wells should include historical and projected use for the projected use should reflect expected pumpage from that well if the transfer were not to be. Enter the 'Without Transfer' water use for the first 'FROM' Well in Column D.

for the second 'FROM' well in Column F, and for the third 'FROM' well in Column H.

Prior to the expected date of transfer, the 'With Transfer' use should be the same as the 'Without Transfer' use.

If only one 'FROM' well is to be represented, pumpage in columns E, F, G and H should be 0.

If two 'FROM' wells are being represented, pumpage in Columns G and H should be 0.

Projected water use in the 'TO' well and the 'FROM' wells will be used to estimate the change in effect to the river reaches caused by the water right transfer. (See user's manual.)

Calculating Effect of the Transfer on River Gains and Losses

After all of the above steps have been completed, the effects of the proposed transfer on gains of the eleven hydraulically connected reaches of the Snake River can be estimated by clicking the 'CALCULATE EFFECTS' button. This will result in a multiplication of the response function for the model runs) times the water use rates entered in the table provided in columns B through H. After the multiplication has been performed, the spreadsheet will automatically advance to the worksheet. Here one graph is provided showing the effect for each of the 11 reaches, and a 1 illustrates the net effects on all 11 reaches. Results are also presented in tabular form in the 'EFFECTS' worksheet. See the Users Manual for more information.
