Subject: Transfer 75835

Allen,

Water District #1 doesn't have any objections to adding the new point of diversion described in Transfer #75835, however, a condition should be added to document the continuance of the administrable requirement in place since the approval of Transfer #4859. The Water District #1 Watermaster needs to know the portion of percentage of the 77.9 cfs water right to be delivered to each of the individual points-of-diversion prior to the commencement of irrigation to ensure the proper distribution of natural flow to all diversions other diversions in the Snake River system. The condition could be worded as follows:

Prior to the diversion of right 1-23 during the irrigation year, Southwest Irrigation District must notify the Water District #1 Watermaster of both the date when diversion of right 1-23 will commence and the portions or percentages of the water right that will be assigned to each of the four listed points-of-diversion.
