Kevin, Dave,

I have received a second beneficial use field exam done by Jim Stanton for 37-8759 (Donna F. Tuttle Trust represented by James P Speck).

In his comment for this water right, Jim said,

"There is not a lockable controlling works suitable for watermaster control as required on the permit, but the watermaster is currently working on this issue in WD 37. I propose to license the permit ASAP and let the watermaster deal with this issue."

At this point, in spite of two field exams, I still can't issue a license for this water right. The conditions of the permit have not been met. I do not have anything in writing from you as the watermaster in Basin 37 that this un-lockable system is ok.

It appears that the system capacity is more than the permit but I don't want to send this one back to Jim again if I am not correct.

The purpose of this email is to get a confirmation from you that you have not exempted this water right from the requirement for a lockable control.

Thanks,

Michele Edl

Thanks for the email. Let me get together with Kevin which probably won't happen until after this weekend. Will respond asap.

David
