

MEMORANDUM

TO: Four Applications for Extensions to Avoid Forfeiture:
63-4695, 63-17863, 63-31312 & 63-31313

FROM: Steve Lester 

DATE: August 26, 2010

RE: Evaluation of Sufficiency of Information Submitted

Additional information common to all the applications is with extension file 63-4695: application narrative, staff memos, correspondence etc.

The rights serve land on Eagle Island and were the subject of Transfer 72596 approved in August 2007 with three years to complete the transfer changes. See 8/10/10 staff memo about the request for more time to complete the transfer and how that relates to these extension applications.

Consultant Steve Holt, T-O Engineers, is the contact person for the applicant.

Summary of Information Submitted

Authority to File: The rights are in the name of the applicant. The applicant can file the applications.

Water Right Validity: The rights were decreed in February and April 2007, confirming their validity through early 2012.

Injury to Other Water Rights: Extensions to avoid forfeiture will not injure other rights.

Discussion

The partial decrees were migrated in the database.

Rights 63-4695 and 63-17863 involve ground water from existing wells. Rights 63-31312 and 63-31313 are Boise River rights and require watermaster comments. Copies of all the applications will be sent to the watermaster since this is a package deal.

Decisions issued for these applications should include:

- response to the request for more time to complete Transfer 72596
- copy to consultant Steve Holt.
