Brandon,

Sorry I have not got back to you sooner, I have been out of town.

I tried to load your shapefile into my project and either something did not copy over or a piece was missed. I opened the attribute table and it is empty.

Jana,

I looked over your copy of the shapefile and I noticed that some vertices implicated BLM land. Those BLM lands would be included in a list of POUs if you were to generate a list of POUs using the shapefile. In the past we used to move vertices around and snap them to GCDB but we were never perfect, so now we just use the erase tool since we figured out we were having problems removing BLM lands entirely.

If you would like, you can use this shapefile that will exclude all the BLM land. Here is the shape I created.

Brandon,

Here is the Southwest shape-file that I cleaned up from your tabular pls list. Let me know if you have any questions or find any other issues.
