

MEMORANDUM

Date: September 23, 2010
To: Water Right File 75-14064
From: cpadilla
Re: License Memo

There are no overlapping rights found on the place of use for this right. However, it appears that the system is shared by a few other rights owned by the BLM, as mentioned in Nate's analysis. The capacity of the system is recorded in the water right license of 75-7041 as 0.02 cfs. The overlapped rights are as follows:

75-7041: 0.02 cfs	} No combined limit (should have been limited to 0.02 cfs). Cannot impose new limits at this time so will limit this license to 0.04 cfs-these two being additive and this license will not be adding rate just volume.
75-14404: 0.02 cfs	
75-14064: 0.02 cfs	

The volume for this right is based on 220 range cattle. The worksheet for range cattle consumption in the field examiners book shows a volume of 2.9 afa. The department views the volume for stockwater and wildlife one in the same (not additive).
