WATER RESOURCES
WESTERN REGION

Via E-mail

Dear Vicky,

The measurement of the pond is 62 feet by approximately 50 feet. The maximum Depth is 7 feet. The pond bottom is tapered and I have estimated the average depth to be 4.5 feet. The pipe exiting the pond was installed within two weeks of our October 13th prehearing. The trench in the abandoned pond in the next drainage to the west was done the same day.

We measured the water exiting the pond versus the water in the creek drainage above where the pond water dumps into the creek bottom. Of the total water in the draw where the pond has been built, 80% of the water is coming down the creek and approximately 20% is coming from the pond. Prior to building the pond, no visible water was entering the creek from this spring where the pond was built.

If you need any other information or desire pictures of the work done, I will be glad to provide it.

Sincerely,

David Dean
