Yeah, let's drop it. After we met I started thinking about that possibility, so I looked for a precedent. We have not been consistent, but I found at least a couple where we just dropped the condition.

Hi Shelley,

They are outside of the boundary established in memo 59 and they are within 50 feet of the permitted water bearing zone as developed. Do I understand correctly you are saying that I can drop the water bearing zone condition?

Monica,

See the logic used in the attached memo to address water bearing zone. If the City of Meridian wells are outside the boundary established in Application Processing Memo 59 and they largely complied with the water bearing zone that was permitted, we can drop the water bearing zone altogether.

Shelley
