Re: Evidence of reinstatement of permit 95-8894

On June 28th, 2010, IDWR received supporting documentation to reinstate permit 95-8894.

The development period for the permit was from January 3, 1995 thru January 1, 1998.

The permit holder supplied a well log showing that the well was drilled in February of 1995. In addition, an affidavit was submitted Bob Haynes stating that he had first-and knowledge that installation of the sprinkler system occurred prior to January 1, 1998.

This does not speak to the extent of development, but supports that at least some development took place during the authorized development period. I recommend reinstating the permit.

A field exam will need to be conducted.
