Gentlemen:

This date, I have discussed the proposed transfer referenced above with Randy Budge. The transfer, as now presented, seeks to move water right 27-7452 from its Decreed point of diversion at T6S, R43E Sec. 21 SWSE to T6S, R43E Sec. 36 NWNE; a well currently occupied with water right 27-7121. The original concern started with a review of the original license of 27-7452, not the decreed version.

Idaho Department of Lands has no further issues with the transfer as presented, except the text of the advertised verbiage. Please, compare the text from the transfer Supplemental Information page to the transfer page that reads "Applicant's Statement of Purpose:..." You will note inaccuracies in text, to include omissions, as well as quantities of water and dimensions of the described trench.

I appreciate your attention and consideration of this important matter.
