Carey Water Permit

Mr. Walker,

As part of the water use permit for the Carey Campus the existing fire protection well was included as a potential water source in the original application. Upon further research, it has been decided that the fire suppression well is not a viable candidate. Additional paper work has been submitted to the IDWR to exclude that existing well.

Please submit the additional paper work and remove all reference to the existing fire suppression well located on the Carey Campus in T01S R21E Sec27 NWNE.

Thank you,
Lonnie Barber
