Hello Jeanie,

I had the same question before submitting the application and the mine operators confirmed that none of the buildings in the SESE Section 1 receive domestic/potable water. I do not believe that any changes are required. However, this message is copied to both Bert Doughty and Kyle Kitzman at the mine so as to provide the opportunity for clarification if needed.

Thank you for checking and inquiring.

Best regards,
Scott

Scott,

While looking over this transfer I noticed on the 2009 aerial photo that there is a building that straddles the SWSW and SESE of Section 1. I don't know what this building is used for but wondering if the domestic right should also cover it, which would mean adding the SESE to the place of use on the transfer? I've attached a map for you to look over. Let me know what you think and if you need to make a change, you can send me a new page for that part and a new map. (The yellow outline is the current water right shape and the green outlines are the tax lot shapes.)

Jeanie
