Thanks Aaron.

Mary is on vacation until next week. When she gets back we'll work on the ad.

Allen,

Application for Transfer No. 76160 has been amended to propose common points of diversion for all rights included in the transfer. I updated Workflow to reflect this change and the associated documents, including my review memo, have been scanned into the water right file for 36-2461A.

Scanning and profiling of documents associated with transfer 76159 should be completed later this morning and scanned into the file for water right 36-16140.

Please proceed with advertising applications for transfer 76159 and 76160 if you think it is appropriate at this time. Otherwise, please let me know if you have any questions or concerns that I may be able to address.

Thanks,
Aaron

Thanks for pointing that out Allen. I expect that the applicant will want to amend the application to show both points of diversion on each right within the permissible place of use. I'll correspond with the applicant and get back to you.

I guess I have a question about the creation of a PPU under T76160 without having a common set of wells for all the rights. Seems a little odd. I'm wondering if this is an omission that needs to be clarified before advertising.

Allen,

I am working as the primary reviewer on transfer application nos. 76159 and 76160. I have reviewed the applications and think IDWR can proceed with the public notice requirements for the applications. Attached are my review memos for each transfer application. The memos have not yet been profiled to the corresponding water right files. I would like to await for a review and suggestions from you or your staff prior to profiling the memos. All other documents related to the transfer applications are profiled to the corresponding water right files. Please review and let me know if you have any suggestions. Otherwise, I would like to request advertisement of the applications.

Thanks,
Aaron
