Dear Mr. Marshall,

In regards to the application for Transfer No.75969 I've attached a letter from Bob Baker authorizing Steve Meyer to submit information regarding the water use at Camp Lutherhaven.

Camp Lutherhaven was established in 1946 and began water use in June of the same year. The camp was originally set up with a pump drawing water out of Lake Coeur d alene and pumping it up the hill to a central pump house that distributes water to several bath houses, the kitchen, and various cabins and staff residences around the property. Sometime after that date, and prior to the recording of well logs a well was drilled and set up with a pump that produced 50 gallons per minute of water. When the well was installed, it was connected to the pump house distribution system and the lake pump was used for irrigation and fire suppression.

In August of 2009 the 50gpm well was found to be contaminated and unfit for potable water. The lines were capped at the pump house and a new well was drilled on the Northwest corner of the property. The well was set up with a pump and valve which made it capable of producing 5 gallons per minute. A second new well was drilled 300 feet to the South East of the first new well and it was set up with a pump capable of producing 15 gallons per minute of water.

It is our intention to use new well #2 as our primary water source for the Camp and hold new well #1 as a backup for emergency use. Both wells will be connected to a 12,000 gallon holding reservoir located next to new well #2 and will be connected through gravity fed pipes to the main distribution lines at the pump house. From that point the water will continue to be distributed to the bathhouses, kitchen and various cabins and staff residences around the property as it has since the camp was established.

Thank you for your assistance in this process. If you need more information, please contact me at 208-667-3459 x-12.

Sincerely,
Steve Meyer
