MEMO: File 47-7705
FROM: Loren O. Holmes *LA*
RE: Additional information

Following an interview with Wayne Skeem, I was able to draw the attached map showing the various water permits in the Sun Trap Ranch project.

Groundwater under this application would be comingled with Mud Creek water to produce hydro power after use for heating and/or fish production.

Mr. Skeem said the uses described in the application represented all potential uses of the water and that the temperature and amount of water produced would govern the actual development.

Mixing of hot groundwater with surface water would allow production of warm water fish in facilities now used or proposed for trout production.

Flows for heating and recreational use are analyzed in my memo in this file dated April 28, 1981.
