RE: Licensing 63-11772

This memo serves to record some of the decisions I made while licensing 63-11772.

Source/POD: Confirmed by field exam. Scott King of SPF took a GPS point; verified that location with imagery. This right is supplemental, so made sure supplemental conditions were on ^{the} right. Diversion capacity of well verified in field exam for 63-3584.

Water Use: Irrigation confirmed by field exam submitted and by imagery. Recommended standard season of use, as permitted. No annual volume on this right since it is not our practice to do this with supplemental rights. However, this right was permitted with a combined use limit condition of 0.02 cfs per acre with an annual volume of 693 af. I changed the annual volume in the condition to 565 af, indicating the reduction in acres from the permit to the license (125 acres * 4.5 AF/yr/ac).

POU: Field exam found some incremental acres (i.e. 10.3 acres in Section 27 NENW). However, it is not our practice to include incremental, or fractional, acres when the acreage in the QQ is over 10. Therefore, all acreages are rounded.
