

MEMORANDUM

TO: Application for Permit 43-13664 File

FROM: Corey Skinner

DATE: May 26, 2010

SUBJECT: Site Visit

On May 24th, I visited the site involved with Application for Permit 43-13664 to investigate the adequacy of the described source(s). Both proposed points of diversion are located within property that appears to be irrigated. Note that the land involved with Application for Permit 43-13664 is located within the Almo Water Company place of use. During the visit it was observed that the area was quite marshy and some riparian vegetation was noted in the area. Based on field observations, it appears that unnamed streams and springs are located in the area(s) described on the application. The following photos, document my observations...

ABOVE: View looking west into the NWNW of Section 26 (beyond fence) showing the general area of the proposed unnamed stream diversion (located between fence and house). Note the low spot/ channel in the indicated area and willows in the left foreground of the view.

BELOW: View looking southwest to west near the center of the north ½ of the NENW of Section 26. Cattail growth was observed in the area indicated which is the suspected spring location. Also note willow growth in surrounding area.
