With our minimal use of water on our 23 acres there should not be a noticeable decrease in water. I believe according to the charts that there are only two irrigation wells with in one mile of our property. There should be more than ample amount of water. We plan to drill this well as soon as we get approved. We plan to plant a grass or alfalfa crop. Both my wife and I are employed and we are expecting to pay \$20,000 for a well and another \$15,000 for a wheel line.

RE: Application for Permit 15-7332

Dear Applicant:

The Department has received the above application for permit to appropriate 0.6 cfs of ground water in the Malad River drainage. For new appropriations, under Idaho Code § 42-203A(5) IDWR has the responsibility to ensure there is a sufficient supply of water and that the appropriation will not result in injury to existing water rights

Historically, when issuing permits for new appropriations, IDWR viewed ground water and surface water as two separate sources. Often the impacts of new ground water appropriations on existing surface water rights were not evaluated. However, Idaho water law now recognizes that in many places ground water and surface water are hydraulically interconnected, and proper administration of existing water rights and new appropriations requires conjunctive management of both sources.

In March 2009, the Department received a letter from the Oneida County Commissioners expressing their concern about the perceived decline in flows from springs and artesian wells in the area. Their letter questioned whether the Department should continue issuing new permits to appropriate ground water in the Malad River drainage. In response to the commissioners' request, the Department's Hydrology Section has been tasked to review available information and data on ground water and surface water supply in this drainage. The Hydrology Section's report will be helpful in developing water policy for the Malad River drainage.

Meanwhile, applicants who want IDWR to take final administrative action on their applications can provide IDWR with the information required under Water Appropriation Rule 40.05 regarding the availability of water for the proposed appropriation and the potential for the proposed appropriation to injure existing water rights. The additional information requirement is usually waived for applications proposing the appropriation of 5 cfs or less or the storage of 500 af or less. Because of the concerns regarding the impact to springs and artesian wells in the area, the department is requiring that applicants submit the additional information required by water appropriation rule 40.05, even when the application is for less than the 5 cfs / 500 af thresholds. Only certain

applications for small domestic and stock water uses and applications to divert ground water for domestic in multiple homes are exempt from the additional information requirement. A copy of the pertinent sections of Water Appropriation Rule 40.05 is included in this letter. If you believe that a particular section of Rule 40.05 is not relevant to your application, please explain why.

Ultimately, the applicant bears the burden for demonstrating that the water supply is sufficient for the proposed appropriation and that it will not cause injury to other water right holders.

Please submit the information within 30 days of this letter. If you have questions concerning this matter discussed above feel free to contact the Eastern Region Office.

Respectfully Submitted
