RE: PERMIT NO. 87-10054 STATEMENT OF COMPLETION

POND LOCATION: 5199 Robinson Park Road
Moscow Idaho 83843

Dear Ms. Block,

The necessary steps were taken to create a pond on our property. The pond was dug (12 feet down) and a damn was created in summer of 2008. Spring of 2009 the pond was completely full and (as designed to meet requirements) there was appropriate run-off.

We have successfully met all requirements as authorized by the water right permit (regarding #5 of the Statement of Completion) regarding our pond (as authorized by the water right permit) focusing on our pond's use for recreation, wildlife, fish propagation and fire protection.

My family has always wanted a pond and now the pond is complete. I am committed to do what is necessary to maintain the pond for recreation, water for wildlife and for water use in case of fire. Now the pond is full and has met the requirements, we look forward to having fish propagating in the pond. If necessary, I will install an aeration system in order to prevent "summer kills".

Water for Wildlife

The wildlife using our pond is extensive. We have seen over 15 wild turkeys, many, many covey's of quail; several deer with fawns; and a herd of elk. We also have seen one mother moose with twins! Come fall, bachelor herds of elk were seen and many flocks of ducks and geese.

Of course we here the coyotes off in the distance at night and we have one very large owl living in the trees behind our home, uses the pond.

Fire Protection

In case of a fire, we have a water pump and long hoses we can use. It is a comfort zone for us to have the pond to protect our home, trees and undergrowth.

Fish Propagation

The pond filled up after the winter of 2008, and remained two thirds full the end of summer. 2009-10 is the pond's second year. During the winter water runs out of the spillway and run off continues until mid-summer. We will have the water tested in preparation for the pond to have fish.

I am so pleased with the success of our pond. The pond has been full to the brim while providing a successful spill-way. I believe that fish will thrive in our pond and propagate. This summer we will install an aerator and mesh screens at the spill-way. We want to do all we can to guarantee our pond can provide the right environment for fish (i.e. bass, crappie, and bluegill)

I hope this is the information you need in addition to the Statement of Completion. Please feel free to contact me if you have any questions or concerns. I am including pictures of the pond the fall and winter of 2008-2009.

Best regards,

A handwritten signature in cursive script that reads "Dickie Lee Patton". The signature is written in black ink and has a long, sweeping horizontal line extending from the end of the name.
