Subject: Southfield Properties Rights; NE1/4 Sec. 9 T8S R14E

Aaron – Of the 123 acres covered by these water rights (141-ac ppu), ArcMap shows 117 ac irrigated in 2004. The 2 south pivot corners were not irrigated by this system then. A few acres in the SW/NE were watered from another well under a different water right under an apparent unrecorded transfer, so should have nothing to do with the rights in question. So at least 6 acres have not been watered for at least 6 seasons. Starting in 2005, they began converting land under the pivot to a compost area. In 2005, 29.9 acres were put into a mitigation plan and therefore protected from forfeiture; my recommendation already takes this into account. My review indicated that anything over 95.4 acres should be declared forfeited, which is all of 36-7547F & part of 36-7377 (11.1 acres, 0.15 cfs, 44.4 afa).

Where do we go from here?
