RE: Bashaw – Picabo Ranch

Here are the following:

1. Attachment "A" for Part 1.B.1. showing all surface rights and the amount of cfs being transferred. The diversion rates are equal to the claimed rates, except for 37-00448 which was claimed in conjunction with 37-00237B for 1.65 cfs. I researched the history with Lee Peterson and determined that 37-00448 should be 1.35 cfs and 37-00237 should be 0.22 cfs, for a total of 1.57 cfs. The rest of the claims agree with the watermaster records except for a few very slight discrepancies which are probably due to rounding errors when the rights were split.
2. Attachment "C" for Part 2.B.3. for the surface rights. As you have recommended, this is a land list representing the 672 acres currently licensed under the groundwater rights.
3. Part 2's for all surface rights that are being split. The diversion rate splits on these forms match the values in Attachment "A".

Please give me a call if you have any questions.
