Craig,

I don't see any reason to hold off. Just be sure to carry forward the trust water conditions and update the trust water flag in the database.

Hey Shelley,

There isn't any reason we should hold off on this is there if this is one of those files in the Swan Falls/Idaho Power pile that has been set aside?

Thanks,
c

Craig,

Can you help Denise with this licensing request. I think it fits within our priority categories. I would prefer to issue the license and pursue a transfer over trying to amend the permit after proof has been submitted.

Thanks.

Shelley

Subject: Permit 34-7239A

Shelley,

I need to get some direction from you. I received a phone call from John Powers (34-7239A) wanting to find out some information about his permit. He wants to change the POD but it has not been licensed yet.

He came in around December 1st and talked to Blake about this and was told that nothing could be done until it was licensed.

A field exam was performed on 8/1/2001 and the file sent to Boise on 3/25/2002. Nick Miller updated the POD on 6/5/2006. That is all the information I can find. Was this assigned to someone?

John Powers want to know how to get the ball rolling. Can you direct me to someone who can update me on the progress of this permit?

Thanks,

Denise Kidman
