Shelley,

From our discussion yesterday here's a suggested change for Condition #5 for the Transfer 74449:

5. Prior to the diversion and use of water under this right pursuant to Transfer approval 74449, the right holder shall install and maintain, in accordance with Department specifications (unless such a measuring device has already been installed and approved by the Department or Water District No. 37):

I hope we can get the approvals finalized early next week. Can we shoot to send around revised approvals by Tuesday?

Thanks,

Travis
