Subject: Morales Pond

Ernie,

We were in the Wolverine Creek area last week and stopped to measure the Morales pond. Here are the details:

May 21, 2009
Pond Inflow = 0.84 cfs
Pond Outflow = 0.81 cfs

This is very similar to our earlier measurement.

I told Susan Morales that I would pass this information on to you. I am willing to make more measurements throughout the summer if we need them. The losses may increase some during July and August when evaporation is at its peak.
