Zach,

After re-reading Cindy's memo and discussing it with her, it seems pretty obvious that that right is overlapping with A&B and must be considered supplemental. It cannot be moved to a place without A&B water without enlarging the right. Even if you were to move it and say you were putting it into the CREP program, that would still be considered an enlargement because a supplemental right would be getting credit as a primary right. I'm not even sure if a supplemental right can be put into the CREP program. The only thing you might try is to figure out what it might be worth as a primary right, certainly not the entire 25 acres, and move that with the remainder going away. Or, forget that right, and just leave their acre limit another 10 acres or so short within their PPU. Jeanie

Zach,

In looking at Arcmap of that area, it looks like more than the 17 acres in the NESE of Section 22, covered by right 36-7945, have been watered. That right also has a remark that states that it is combined with A&B Irrigation District water. If this is the case, we would consider the well supplemental and would require additional pumping information and records to determine it's actual use and then make the determination of how much water we would allow to transfer or how many acres they would actually need to dry up. (Refer to the transfer memo regarding supplemental rights.) Please get information as to how much A&B water they have and pumping records for the well or this whole part of the transfer may unravel and fall apart. Jeanie
