

MEMORANDUM

Date: January 11, 2010
To: Transfer 75355
From: bjordan
Re: Revised Transfer

This transfer proposes to change the point of diversion and add a point of diversion for water right 74-341. Steve Spencer who is a Water Use Specialist for the USDA Forest Service brought to out attention that the proposed changes to the PODs may have been described incorrectly. The Legal descriptions for the PODs were based off of the GCDB that IDWR uses. Two of the PODs are located on Homestead Entries which were not surveyed. The GCDB indicates that the POD to be changed should be in the NENE of 15N, 25E, Section 5 (Homestead Entry 146, see document). The actual location of this POD is in the SENE of 15N, 25E, Section 5. The GCDB indicates that the POD to be added should be in the SWNE of 15N, 25E, Section 8 (Homestead Entry 541, see document). The actual location of this POD is in NENW of 15N, 25E, Section 8. The third POD located in the SWSE of 16N, 25E, Section 28 is not located on a Homestead Entry and does not need to be modified.

As a result of these changes, this transfer will only need to add a POD. The proof report for right 74-341 describes the PODs correctly.

Under Transfer Memo 24 page 5, a transfer is not required when a change in the description of the location of the point of diversion or place of use is only the result of improved methodology for referencing and displaying the location, which results in a more accurate description of the same physical location. Therefore, there is no need to re-advertise or amend transfer applications. Changes will be made in house.
