TA-DA! Here are the scanned docs including the letter, watermaster comment and 2 maps. There are also some photos he sent for you, so I'll send you those along with the originals in statehouse mail (I made copies for my file).

37-7861.pdf

37-7861 is for hydro #1. The pou on your draft license is incorrect. It should be in NWSW S27.

37-7719 is for hydro #2, also in NWSW S27, and reflects a higher rate of diversion due to the waste water from a neighboring property which is diverted at the fish pond above the lower hydro. Based on info I got from Mr. Mecham, I would go ahead on 37-7719 and add a source to include waste water, and use the pod permitted in NWSW Sec 27. I marked on the map where the actual pod should be located, at the fish pond.

At first glance it seems appropriate to limit 7719, 7861 and 7862 to 2 cfs. Permit 7719 was issued for 3.29 cfs, though. Neither of the other rights (clearly) identifies the waste water source, so there is a possibility it could be additive to the spring source. Was there a measurement made over the fish pond weir during the field exam? I'm not advocating either way, just don't want to overlook something.

let me know if you have more questions.
