

MEMORANDUM

Date: June 11, 2009
To: Water Right File 47-7991
From: Michele Edl
Re: Status

I believe that this water right (47-7991) is very near licensure.

The SRBA hearing for this right has prompted recent action by several of the parties involved. In the last few days I have exchanged several phone calls and emails with the plant operator and through him, the permit holder and owner of the facility. I believe that I have now collected the authorization that I need in order to add a condition to the license that was not on the permit.

A new draft of the license will include the condition. "The source of this water right is waste water. The wasting of water may be discontinued at any time."
