Excellent timing! You can tell them that the paper for the assignment of permit 25-7583 to the Township Park Estates Water Association arrived at the state office Monday May 18, has been scanned in and added to the backfile.

At the risk of repeating myself, please focus this document search and retrieval to the period before proof was submitted. Although understanding the current system may help us fit additional use onto the system, for this water right, I need vintage information; no later than spring/summer 1994. I expect that the original pumps may have worn out and been replaced. But you and your resources have been able to put together a remarkable support package so far. I have high hopes that there is more where that came from.

By the way my first name is spelled with one L

Michelle:

Thanks for the email. I have a meeting tomorrow with the homeowners, so I believe I can obtain the information you. Expect an email from me on Friday.

Thanks,

Robert L. Harris

Rob,

I have begun the licensing review of the documentation you submitted last month on behalf of Township Park Estates (permit 25-7583). Your submittals constituted one of the best documentation packages I have worked through so I have made good progress. Before I can issue a license, we will need to process an amendment to add the second well/point-of diversion. The permit only lists one.

But that's not the primary reason for this email. I am required to determine the system capacity for every license and I have found that I need a little more information about this system before I can do that. I am hoping that you or one of the contacts you have already tapped for this permit's submittals can locate the information I need.

The plans you provided from Benton Engineering indicate that a 15 hp pump was installed in at least one well. The bid documents from Andrew Well Drilling Service suggest that two pumps in two different sizes could be installed to accommodate variable demand on the system and Mr. Fielding's 1994 proof statement indicates that two different sized pumps were installed.

Would you please provide documentation which confirms:

- 1) the size and number of the pumps that were installed, (Their associated pump curves would be an added bonus)
- 2) whether they could be operated simultaneously?

I would also value any internal or external photos of the well house but they are not as critical to the licensing process.

The amendment and license will be held up until I can make a capacity determination. So please let me know if collecting this additional information is not possible. I will initiate pursuit of it from this side of the state.

Thanks
