See T. 73903

Hi Steve,

You have my permission to make the change on the water transfer for the new well I drilled in the summer of 2008. Greg

Greg,

Below is an e-mail conversation from IDWR outlining a way that I can make some minor changes to your Application for Transfer of a Water Right that is currently on file at the Department. The easiest way to make the minor changes I listed in the e-mail below is if I personally go to their office and make the changes. If this is acceptable, please reply to this e-mail saying so. If not, I can certainly redraft an application with the changes and have you provide your signature.

Thank you.

Steve H. -

The transfer applications are notarized documents under the previous format we used. We have been careful about amending notarized applications in the past for obvious reasons. Now, however, the new transfer application form does not require a notarized signature. It seems reasonable to me if you can obtain something in writing from Greg (email is fine) authorizing you to make changes to the applications. Then you could make the changes on the original applications at Western Region office. If the changes are substantial/numerous enough to make it difficult to do on the originals, amended applications could be prepared for Greg to sign.

Just let me know once it's decided and we can follow up. Thank you.

- email from consultant -

9/9/2009

Steve L.

I talked with Greg Troost, and he is very excited to have his application at the top of the stack and does want to proceed with transfers 73902 and 73903.

As you pointed out, Transfer 73903 needs to be amended to reflect the changes made in 74917. Here is how I am thinking. The new well added as a result of transfer 74917 is on "Farm #1" and therefore affects transfer 73903 only. The wells on Farm #1 are not cross connected to Farm #2. The list of PD's in transfer 73903 needs to be changed to include the new well in SWNE Sec 36.

I would also modify the description of the diversion system to include this new well (Part 1, B.6.a). Also, if you prefer, we can tweak the QQ descriptions of the dairy wells and the scale well to match the GPS locations shown on the color maps of the application. When I plotted the well locations on the map, the dairy wells are in the SESW (not the NWSE) and the scale well is in the SESW (not the SWSW).

73902 can remain as it is.

I can come in to make the amendment or I can coordinate with Greg Troost to have his initials on the changes. Greg lives out near Parma, so it is not easy for him to come personally. Please let me know the best way to make the changes.

Subject: Troost transfer applications

Steve:

Well, it did not work to get the 2 Troost transfer applications processed - the ones filed in 2005 and much-promised to be taken care of. Sorry about that.

My questions today are aimed at getting these 2 old ones processed.

Please see the attachment: pg 1 is cover page of approved Transfer 74917 that addressed the well emergency last summer, pg 2 is cover page of Transfer 73902, and pgs. 3-4 address Transfer 73903.

Questions:

- 1) Does your client still want to proceed with 73902 & 73903?
- 2) If so, should they be amended? Some/all rights overlap with 74917, which changed a P/D. I imagine this would at least alter the P/D info on the 2 remaining applications, but perhaps there are other needed changes.

Let me know what your client would like to do and we will act accordingly. Thanks.

Steve
