Reference: Water Right Permit 63-31183 Annual Report – 2008
Micron Technology, Inc. – Boise Site

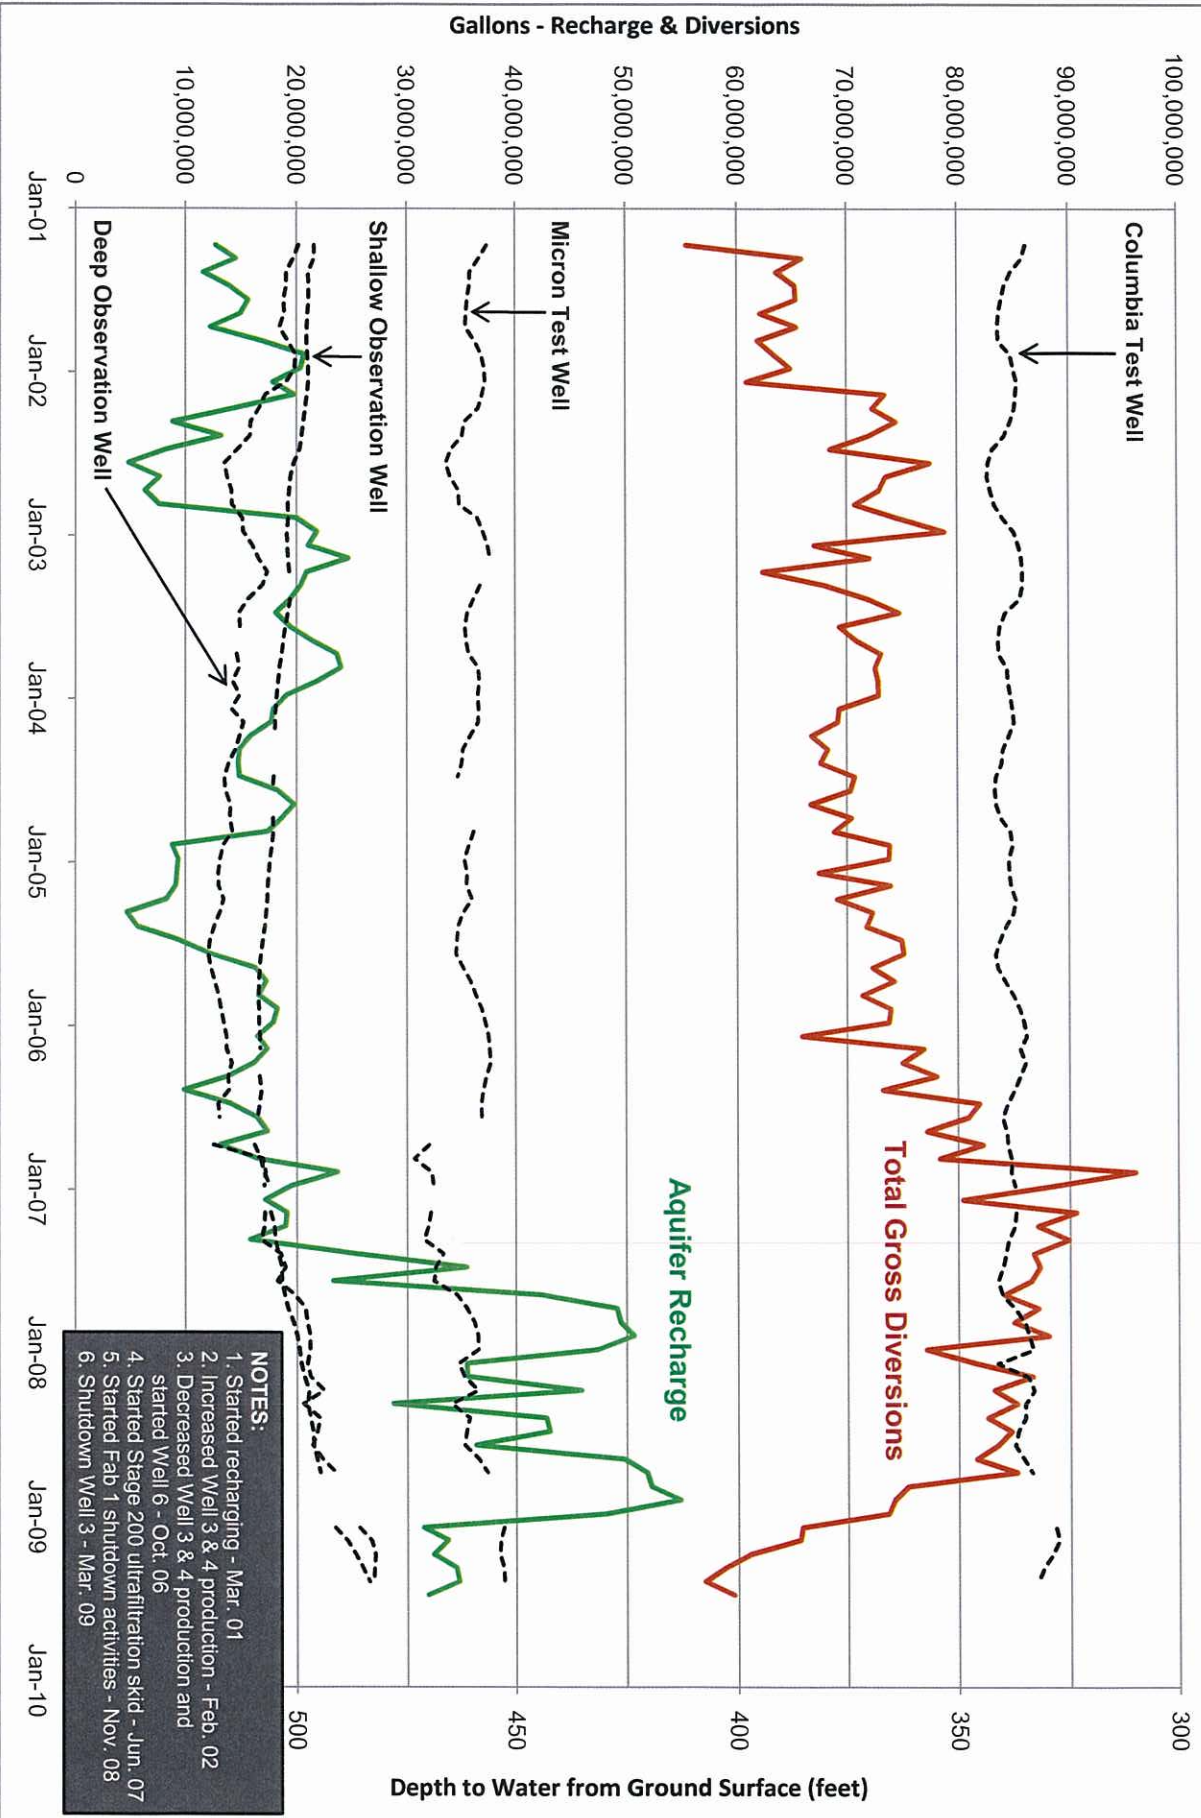

Dear Mr. Peppersack:

Please find enclosed the 2008 Annual Report for Water Right Permit 63-31183. To fulfill the requirements of Condition #9 of this permit, Micron Technology, Inc. is submitting a chart that depicts recharge volumes, diversion volumes, and local area water level hydrographs. The chart indicates continued stabilization and minor improvement in the deep aquifer water level as a result of Micron's efforts to reduce net diversions. Please note that the chart encompasses data from the commencement of recharge activities at the site in April 2001. Water level data prior to April 2001 has been provided to IDWR in previous submittals. Additionally, at the request of Michele Edl, an Associate Engineer at IDWR, two summary tables are included with the 2008 Annual Report – one of historical recharge and diversion volumes and one of monthly ground water levels measured during this reporting period. If you have any questions regarding this submittal, please contact Michelle Atkinson at (208) 363-4619.

Sincerely,

Ricky L. Murray
Water and Chemical Services Manager
