

MEMORANDUM

Date: April 16, 2009
To: Water Right File 63-12420 (Micron Technology Inc.)
From: Michele Edl
Re: Volume recommendation

I received a phone call from Terry Scanlan of SPF Water Engineering this morning. Terry was responding to my letter of April 8, 2009 which conditionally accepted his field exam for this permit but required additional information from him.

Terry said my letter was not unexpected and he stated that he had wrestled with his volume recommendation. He finally chose to submit a flat rate for 365 days and wait for the Department response. He asked me if the Department needed a volume in order to issue a license. I assured him that we did. Given that, he proposed a few alternatives that he thought would not put unnecessary restraints on the groundwater recharge-withdrawal system. Terry is also working up the injection well file and Boise River water is the initial source for the recharge water.

Mr. Scanlan suggested

- 1) supplemental volume tied to Microns Technology's Nampa-Meridian water,
- 2) high flow values from a year just before the permit was in effect.

I agreed to take his suggestions to my superiors for discussion and to get back to him as soon as possible.
