

MEMORANDUM

Date: September 17, 2009
To: Water Right File 85-15699
From: medl
Re: application deficiency

I found that this application document was deficient. No information was provided to 3b). In order to complete the data base entry, inferences were made about the place of use and points of diversion.

The place of use for stock grazing and watering was assumed to be within a NENW quarter-quarter, on property owned by the McCanns and along the estimated stream channel. Beginning and ending points of the stream were also estimated to fit the aerial photograph and property boundary.

A letter requesting confirmation of these inferences will be sent to the applicant.
