

MEMORANDUM

Date: September 22, 2009
To: Water Right File 75-7434
From: cpadilla
Re: License Review

The permit authorized development from Dummy Creek, tributary to the Salmon. Based upon the field examiners findings, he recommends that the source be changed to spring.

POD

Dummy Creek is located roughly 2 miles south of the permitted/licensed POU which partly runs through Sec. 13 and 14. The Dummy Creek location (Sec. 13 and 14) was never described as being the location of the POD in either the map or the legal description on the application for permit. Upon filing the application for permit, the applicant indicated that the source of the water would be located to the NE of their property within Sec. 1 and had originally shown the source as stream. The change in source from Dummy Creek to Spring will be considered a clarification since there is not a physical change in source and the source of water developed was within the same legal description as permitted.

POU

Imagery from 1987 shows that the only buildings on the property at the time the proof was filed was the home and a small outbuilding. The domestic use will be limited to the home. The field examiner also reported that the lawn around the home be authorized under the irrigation component of the right since this is part of the 2.4 irrigated acres.

Volume

The volume requirement for 15-30 stock is 0.4 af. The number of stock comes from the statement of completion filed by the right holder.

The volume requirement for 2.4 acres of irrigation = $2.4 \text{ acres} \times 3.5 \text{ af} = 8.4 \text{ afa}$

The volume requirement for in-house use is 0.6 af

Owner

Joe Bailey has been the only owner associated with this right. Leslie Bailey may have an interest in the right and property, however, until an ownership change is received with supporting documentation, the right will remain in Joes name only.
