RE: Visser Holstein Transfers 75352 and 75353

Dr. Brockway,

This is a follow-up to the email I sent you earlier this week regarding the two parcels located within the large 4,900+ acre PPU (permissible place of use) of transfer 75352 that appear to be owned by someone else. I have enclosed a map to help pinpoint where they are. As I said, in the NWNW of Section 5, T10S, R13E, there is supposedly a loading station owned by Amalgamated Sugar; and there is a parcel which appears to be owned by Idaho Power known as the Blue Gulch Sub-station in the NWNWNW of Section 28, T09S, R13E. Since then I've also noticed that there is another small parcel located in the SWSWSW of Section 32, T09S, R13E, which appears to be owned by a Martin Driscoll. Is there some sort of lease agreement with these parties to allow the parcels to be located within the large PPU or should they be removed?

One of our State Office personnel is currently reviewing the transfers and had a question about the wells. She wondered if indeed all 13 of the wells on top are truly connected to the dairy in transfer 75352 since some of them are quite a distance away and would have to navigate roads to get to the dairy. Please explain how the system or systems are configured for both transfers so we can better understand this.

Feel free to give me a call at the office if you have any questions.

Sincerely,

Jeanie Robertson
Sr. Water Resource Agent
