

MEMORANDUM

Date: June 26, 2009
To: Water Right File 47-7861 Nunes
From: Michele Edl
Re: permit status

I reviewed the contents of the file and verified that we probably could reinstate the permit. However, Jeff Peppersack has directed me to try to bring this to license status if I can do so without too much effort.

I sent an email request to the Southern Region agent who was the last IDWR point of contact and may be able to clarify the best contact on the permit holder side.

I expect to need additional information: pumping system diagram, pump curves, and probably a measurement. A deep 12-in well could put out 500-1000gpm. The Statement of Beneficial Use form lists 1.2 cfs or 538.6 gpm but permit authorized 1.32 cfs (592.5 gpm).

June 29, 2009

I called USDA/NRCS in Kimberly and spoke to Stan Haye. He is in process of redesigning Nunes plant for a new pivot. He believes that he will be able to collect archive pumping plant information. I told him that I have enough information to reinstate the permit and that the permit will be held hostage in hopes of receiving sufficient information to license.
