Michele,

Roger is not a certified water rights examiner, but we do work with Paul Scoresby of Schiess and Associates, and he is certified. It doesn't look that promising to find pump curves, but Doug said they will keep looking. I will talk with Roger and see where he thinks we should go.

Kristin,
It looks like the straw-man license I drafted is getting poked at. And that's as it should be.

I discussed oversight of a well-pump event with my supervisor.

I learned that your boss, Roger may be a certified water rights examiner and if he is willing to certify a pump event, then IDWR could accept it as evidence.

And as you and I discussed on the phone last week, I would also be willing to revise the licensed rate based on appropriate pump curves from somebody's archives.

Michele,

I have been talking with Doug and Jason from Driggs on the high school well. This is what they have so far, which is not much. Would it be possible to use a current reading on the well, provided to improvements have been made to it since installation?

Hi Kristin -

I haven't found any pump curve data yet (still have a few files yet to go through). See Jason Linford's reply below; are either of those valid options?

-Doug

Doug,

I just went back through the file on the old water study and couldn't find anything on the pump curve data. I recommend two options. #1 If someone has the well model number and number of pump bowls, I'm sure that we can look up pump curves from the manufacturer. #2 There is a meter in the high school well. When the well kicks on, it can be seen how much water is currently being pumped. IDWR could look at the meter if they have concerns. I think that would be more accurate than well than pump curves.

Let me know if you would like me to do anything more.

Merry Christmas, Jason

Jason -

We have somewhat of a critical need for pump curve data on the high school well to satisfy IDWR; otherwise they will be reducing the water right on that well.

Are you aware of this data being anywhere (in the previous water study?)

Trying to resolve today if possible.

Thanks,
 -Doug

Doug,

We need a pump curve for the high school well so that we can try to get a higher rate than 1.9 cfs. Our maximum is 2.25. If you can find the pump curve, email or fax it to me. In the mean time, don't let the Mayor sign the Application for Amendment of 22-7790, yet.

Attached is a copy of the other Permit Amendment that needs to be made before the transfer can be submitted. Please get this application to the Mayor so he can sign it and send it back to us. But hold off until we can determine if we can find the pump curve for the high school well.

Call or email if you have questions about any of this.

Kristin Moore
