Great. I'll work on getting the documentation to you tomorrow linking the photographs to the high school well. We appreciate your help and patience.

Have a good evening!

We are both working late.
 I have almost everything I need. I am making adjustments to my memo and the license tonight.

First, let me commend Jared on his measurement technique. The city is well served by such a capable employee. Second, as you mentioned earlier in this adventure, I do need some documentation that proves that the meter he was photographing was on the high school well.
 Thanks
 Michele

Michele - should I disregard your phone message; looks like this email was sent after you left the phone message, so I'm assuming all is ok (?). Let me know if you still need additional information from Jared, and I will make sure he gets that message..

All,
 Jared Gunderson has provided me with dated and time stamped snapshots of the dial face of the High School well totalizer during his pump operation yesterday. In particular, he provided me with a one minute reading that showed the pump/well was capable of delivering ~1120 gpm in a short burst. As a consequence of those readings, I will be revising the diversion rate on water right 22-7790 upward and hope to complete that revision before the end of the week.

1/13/2009

Kristin / Michele -

Just wanted to let you both know that our Public Works Director, Jared Gunderson, will be taking time / date stamped photos of the High School Well meter on Saturday (he knows he needs to somehow also show identification of the meter as the High School meter) and we will e-mail this information to you on Monday. I understand we have a deadline on Monday to get this info to IDWR (is that end of day?).

Thanks for your patience. Jared has been out plowing late every night and is trying his best to get the information needed as fast as he can.

Best regards,
-Doug
