Subject: baseline information required

Jared,

This is the email I promised as documentation of today's phone call. Thank you for letting me interrupt your day off.

I meet with Jeff Peppersack, the Water Allocations Bureau Chief this morning. Jeff's signature would be the one appearing on the City of Driggs' licenses 22-7698 and 22-7790 and we discussed both of those water right licenses. Before he is willing to sign them, the department needs to collect additional information from you.

22-7790 High School well

The Department is aware that the pump was replaced after proof of beneficial use was submitted. Without an alternative, the department could accept the readings from the 'new' pump. I neglected to request pump specs and history when we arranged for the measurement. I apologize for my part in stalling this license. The Department needs to know when and why the pump was replaced. We also need make, model and available pump curves for the 'new' pump.

I don't need additional information specific to 22-7698. The back-file for the Lyons Park well is more complete as you have already provided me the pump curves for that pump. .

However, the City of Driggs has additional water rights processes pending. The Department is aware that Jason Linford has developed a water model for the City of Driggs. Additional information from that modeling effort will help us to establish a baseline for the city's water use. Please request information from your consultant pertaining to their model of the City of Driggs' system. The Department needs to know the capacity of the system based on the 6 sources (spring and 5 wells) that are currently online. We don't necessarily need an additional modeling scenario run but would like to know the model inputs.

Based on our conversation, you believe that you can collect and provide this additional information as early as Tuesday, February 17, 2009. If I don't hear from you sometime that day, I will draft a more formal information request for you.

Sincerely,

Michele Edl
