

## MEMORANDUM

**Date:** August 06, 2009  
**To:** File 36-2080 & Transfer 75339  
**From:** Pam Skaggs   
**Re:** Condition Limiting Combined Rate of Diversion of New Wells

---

Dan Temple, manager of A & B Irrigation District, contacted Shelley Keen on 08-05-2009 to discuss the limit placed on the 7 new wells added through transfer 75339. The proposed diversion rate from the 7 new wells was identified as 45.0 cfs and the transfer fee was based on this proportional share of the rights in the transfer. A condition of approval identified this proportional limit as a combined rate of diversion limit of 45.0 cfs from the 7 new wells. There are two similar conditions from previous transfers related to other specific wells within the system.

Shelley discussed with Dan options for future changes to these same limited wells. Should A & B Irrigation District want to increase the rate of diversion from the wells with specific limits, a transfer can be filed to move additional water under their water rights to those wells and increase the rate of diversion. The application would identify the amount of water proposed added to the limited wells and the appropriate fee for that rate submitted with the application. A new well would not be necessary to shift additional water under the Districts rights to the existing wells.
