Michele,

Here is the shapefile that I received from Doug Self from the City of Driggs. As far as I can tell, it was projected using *Geographic coordinate system name: GCS_North_American_1983*. I imagine that you have this, but just in case you don't, I attached it.

I have been looking for the pump data that you were looking for. Have you had any luck trying to get the theoretical to work? If not, I might have found what you need. I will know by later today.

As for the amendments for the permits, I believe that we have one or two more to submit. Would it be possible to submit an amendment for 22-7790 before you license it? I believe this would be the easiest way for us and for IDWR to add the wells to the water right. This one was an oversight. I think we missed something, not IDWR.

Kristin

Kristin or Keith,

I believe that I will be able to bring both of the City of Driggs permits (22-7698 and 22-7790) up to license status this week. With that in mind, I reviewed the amendments to permit 22-7698 and 22-13589 that you sent to our Eastern Region office. They had forwarded PDF versions of them to me and I have applied the amendment to 22-7698.

The large POU shape that the department has for the City of Driggs and what you provided with the amendments are quite different. So would you please send me your shape and projection files so that I can import them into our database.

Thank you
Michele
